Vireo Audio — First-response SLA breach memo

To: Neha Kulkarni, Support Operations Manager **Business period:** 1 Jul 2025–30 Jun 2026

Business goal: Reduce first-response SLA breaches from **25.0%** to **15.0%**. At recent volume, that is about **222 fewer breaches/quarter**, or approximately ■**77,800/quarter** in avoided ■350 SLA credits.

What the data says

• The recent 12-month baseline is 2,229 breaches out of 8,934 tickets (25.0%), representing ■780,150 in SLA-credit exposure.

• Morning has 1,906 breaches (85.5% of all breaches) and a 36.7% breach rate. But 1,698 of those morning breaches (89.1%) were tickets created outside the resolving agent's staffed shift. Tickets created within the morning shift breached at only 8.3%.

• Tickets created 22:00–05:59 IST have a 79.1% breach rate (1,579/1,997), representing ■552,650 of credit exposure. Overnight chat breached 1,034/1,034 tickets.

• The roster shows no active Night assignment after 29 Jun 2025. The policy says overnight chat coverage is provided by the Indore Night shift and out-of-hours queue coverage moves to the next shift. The morning concentration is therefore consistent with queue carryover and should not be treated as direct evidence of poor morning-agent performance.

• SLA-credit exposure rose from ■39,200 in Q2 2025 to ■167,650 in Q3 2025, then stayed around ■197k–■215k per quarter through Q2 2026.

Recommended action

• Do not use raw breach count as a morning-agent coaching metric; retain the requested weekly agent/shift report and add a created-outside-shift flag.

• Use existing headcount to restore explicit overnight coverage or redesign the overnight handoff. Headcount is frozen, so test roster/shift reallocation before hiring.

• Prioritise overnight chat and social, then email. Track overall breach rate, overnight breach rate, and within-resolver-shift breach rate weekly.

• To reach a 15% overall rate while other performance stays at the recent baseline, the 22:00–05:59 breach rate needs to fall to roughly 35% or below.

Controls / scope: UTC→IST conversion is explicit; policy SLA targets are applied deterministically; migration duplicates are deduplicated by ticket_id; roster/customer/product joins are validated. The LLM is only for management-language summaries, not KPI calculation. CSAT/refunds/replacements are intentionally out of the MVP scope.
